Cloudflare Nameservers

To use Cloudflare, ensure your authoritative DNS servers, or nameservers have been changed. These are your assigned Cloudflare nameservers.

Type	Value
NS	carl.ns.cloudflare.com
NS	many.ns.cloudflare.com

Custom Nameservers

Custom nameservers allow you to create your own, unique nameservers in place of your assigned Cloudflare nameservers. To switch to using custom nameservers, first create them here, then add them as glue records at your registrar.

[Help](#)

DNSSEC

DNSSEC protects against forged DNS answers. DNSSEC protected zones are cryptographically signed to ensure the DNS records received are identical to the DNS records published by the domain owner.

[Enable DNSSEC](#)

CNAME Flattening

Cloudflare will follow a CNAME to where it points and return that IP address instead of the CNAME record. By default, Cloudflare will only flatten the CNAME at the root of your domain, which is nhentai.net.

Flatten CNAME at root
